Dublin • jauhariyuuv@gmail.com • [linkedin.com/in/yuuv-jauhari-66923a168](https://www.linkedin.com/in/yuuv-jauhari-66923a168)

Software Engineer

I am Yuuv Jauhari, an Integrated Computer Science Student at Trinity College Dublin, I am passionate about using data and code to solve real-world problems and create intuitive software. I have experience and interest in Machine Learning and its applications.

Checkout my Projects Tab on my LinkedIn for more information and insight into my work

WORK EXPERIENCE

Quantexa • Dublin, County Dublin, Ireland • 01/2025 - 09/2025

NLP Data Scientist

- I have developed my expertise in NLP and machine learning while working on impactful projects at Quantexa. • Updated the open-source News Signals Library from version 7.2 to 8.2, enhancing its functionality. • Awarded the Q4 Innovation title for a financial use case demo utilizing the News API. • Authored a research paper on multi-agent simulations, recognized at COLM 2025. • Focused on feature engineering and fine-tuning of sparse ML models and LLMs.

Oracle • 05/2024 - 08/2024

Analyst

- During my 3-month role as an Analyst at Oracle, I was involved in several key projects and training programs that significantly enhanced my technical and analytical skills. Key experiences included: - Gained hands-on training in Essbase Multidimensional Databases, deepening my understanding of data management and analysis. - Developed skills in Apex Application coding, contributing to the creation and optimization of internal applications. - Utilized JavaScript to design and implement an organizational chart, improving team structure and communication. - Conducted detailed analysis work on Excel, supporting various corporate initiatives with data-driven insights.

Fathom • Dublin, County Dublin, Ireland • 01/2024 - 04/2024

Back End Developer

- Worked with Fathom to develop Cloud Builder. A CLI based tool for deployment and management of AWS based infrastructure, which can deploy cloud infrastructure with only a few lines of code and in seconds compared to commercially used options available taking large amounts of documentation as well as deployment time of minutes. This project was selected into Software Engineering Industry Awards. The code has since then been Licensed and made Open-Source. This project and working with Fathom was part of my Trinity College Dublin's Software Engineering Project Programme

BlastAsia, Inc. • Phillipines • 06/2023 - 09/2023

Software Engineer Intern

- Worked as an Intern at BlastAsia. Developed multiple AI related Projects for the company to improve or create new products for clients and new features for the company itself to improve work efficiency. - Developed Machine Learning Model for Generating Figma Code using large datasets from the organization. - Performed Chatgpt API Integration into pre-existing on going project with the company. - Created a Machine Learning Model with internal communication with API to improve accuracy.

Propylon • Dublin, County Dublin, Ireland • 01/2023 - 04/2023

AI Software Developer

- Project Under Propylon Limited to create an ML based software to help in legal technological industry. - Coded Text Classification Machine Learning Model trained over a large dataset of >1000 legal documents. - Coded a Linear Regression Model in conjunction with the Text Classification Model, which achieved >65% accuracy on predicting if a legal bill would pass in a US State based on the training data. - Implemented the successful integration of an ETL pipeline with two Machine Learning Models working in conjunction. - Used XGBoost Algorithm on dataset to bring accuracy from 45% to more than 65%. - Use pickle to bring the ML Models offline to drastically reduce loading times. This Project and Working with Propylon was part of my Trinity College Dublin's Software Engineering Project Programme.

DU Netsoc • 09/2022 - 01/2023

Chairperson

Dublin University Computer Science Society • Trinity College Dublin • 09/2022 - 12/2022

Competitions Officer

Delhi University • 06/2022 - 09/2022

Project Intern

- Research Internship in Delhi University under Professor Shobha Bagai on a math related project on chess simulations and mathematical trees in order to research further on different probabilities of chess moves. - Created a GUI using Java for chess with board that can be upscaled. - Created a modified chess game for research with rudimentary decision based enemy piece to simulate different probabilities of the modified chess game.

DU Netsoc • Dublin, County Dublin, Ireland • 09/2021 - 09/2022

Event Officer

- Events Officer of Trinity College Dublin's Network Society (DU Netsoc)

Mother's International Network • Delhi, India • 04/2018 - 12/2020

Society Head

- In leadership of the Tech Club of school :MINET. led team to multiple competitions and organizing the annual tech symposium 'X' and Online Cryptic Hunt 'CryptX'.

Robotics Head

- Head of Robotics of Tech Club MINET. Worked on multiple robotics projects such as battle robot and line following robot as well as participated in competitions of the same

EDUCATION

Integrated Honors in Computer Science

Trinity College Dublin • 01/2021 - 12/2026

Currently pursuing Integrated Computer Science Honors

High School Diploma in Science

The Mother's International School •

GPA: 95% Overall in Class XII Science Stream Board Exams, 93% Overall in Class X • 01/2007 - 12/2021

AWARDS & SCHOLARSHIPS

Project at Google and Dublin City Council Hackathon • 02/2023

Google

Winner of National Designathon • 04/2021

India Innovation League by IncubateIndX

Inspirit AI Scholars Summer Program • 06/2019

Stanford Alumni

Innovation Workshop • 05/2019

Design Innovation Centre, Delhi University

Second position in Tech Surprise event of CORE 2019 • 01/2019

Delhi Public School Dwarka

Third Position in Inspect Element event of Dynamix 2019 • 01/2019

Ramjas School

Second position in Tech Surprise event of Codewars 2018 • 01/2018

Delhi Public School Vasant Kunj

Special Mention in MIS MUN • 01/2018

The Mother's International School

Young Entrepreneurs Program

TiE Global International Entrepreneurs Organization

PROJECTS

Cloud Builder • 01/2024 - 04/2024

Developed as a software project given by Fathom, a cloud based software engineering company. This is a CLI based tool for deployment and management of AWS based infrastructure, which can deploy cloud infrastructure with only a few lines of code and in seconds compared to commercially used options available taking large amounts of documentation as well as deployment time of minutes. This project was selected into Trinity College Dublin's Software Engineering Industry Awards. The code has since then been Licensed and made Open-Source.

Cocktail Website • 11/2023 - 12/2023

(University Course Project) A website that allows aspiring bartenders, or just someone looking for a new drink to try, to search for different cocktails. Each cocktail is accompanied by a list of ingredients and instruction on how to craft the perfect drink. An account can be set up that allows users to bookmark their favourite cocktails and access them quickly from the favourites tab. I worked on the tests and integration of API into the website. (Backend Team)

US Bill Passing AI Prediction Tool • 01/2023 - 04/2023

Project Under Propylon Limited to create an ML based software to help in legal technological industry. This was a group project, I developed the AI part of the website. The website takes a newly drafted bill as input and predicts the probability of it passing in the specified US State. - Coded Text Classification Machine Learning Model trained over a large dataset of >1000 legal documents. - Coded a Linear Regression Model in conjunction with the Text Classification Model, which achieved >65% accuracy on predicting if a legal bill would pass in a US State based on the training data. - Implemented the successful integration of an ETL pipeline with two Machine Learning Models working in conjunction. - Used XGBoost Algorithm on dataset to bring accuracy from 45% to more than 65%. - Use pickle to bring the ML Models offline to drastically reduce loading times.

Hindi Video Transcriber • 04/2023 - 04/2023

A short project I made in about 3 hours which uses Google API to take a video in Hindi, converts it into an audio file and transcribes the audio in hindi text and then tells the subject matter being talked about as well.

Project at Google and DCC Air Quality Data Hackathon • 02/2023 - 02/2023

A project made for the Air Quality Data Hackathon by Google, Aclima and Dublin City Council. We were given a large dataset on pollution level of each street in Dublin over 1.5 years and were tasked to come up with an idea to help Dublin and/or its citizens. We ideated, prototyped and pitched over the course of 3 days at Google European Headquarters, Dublin. We came up with a working algorithm for the dataset to offer pedestrians a cleaner path to traverse from place to place in the city by prioritizing the streets with lower pollution levels aggregate and it was able to offer upto ~60% decrease in NO2 inhalation with a loss of minimal time, about 4-5 minutes in 25 minutes. As well as gained insights on the overlooked sources of pollution. Cannot link project due to Google data privacy concerns.

Modified Chess • 06/2022 - 09/2022

Done in Java when I was in First Year, does not use good and efficient coding practices. The task given was to create a 5x5 chess board (can be upscaled), with two knights starting on opposite corners of the board. Whenever a knight moves from its

place, the previous place gets blocked and neither knight can move to the aforementioned square. By these rules, the CPU can play against itself or a player and this was used to explore the concepts of mathematical trees

Face Recognition Project • 08/2020 - 10/2020

A machine learning project I did in Highschool, it recognizes faces in Images uploaded to the program and stores them as well.

Line Follower Robot • 04/2018 - 08/2018

Created a Line Following Robot using Arduino IDE

Wireless Robot • 04/2018 - 08/2018

Created a wirelessly controlled robot with a metal chassis using Arduino IDE.

Physical Design Project • 04/2018 - 06/2018

Handcrafted a Design Window Prototype to control intensity of sunlight using polarizers.

VOLUNTEERING & LEADERSHIP

Each One Teach One (EOTO) e.V. • 04/2020 - 07/2020

Volunteer

Taught underprivileged child Mathematics and helped with school studies

PUBLICATIONS

NegotiationGym: Self-Optimizing Agents in a Multi-Agent Social Simulation Environment • 10/2025

COLM 2025

Developed NegotiationGym, a framework for simulating and optimizing negotiation strategies between AI agents using feedback-driven learning.
